

CALMING THE CHAOS OF DATA MIGRATION

Sikich’s migrationIQ by Innovation LABS helps bring existing quality systems together making everything from M&A to disentanglements a simpler process than ever before.

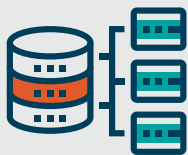

WHAT IS MIGRATIONIQ?

migrationIQ by Innovation LABS is a validated migration tool that simplifies moving data into and out of TrackWise®. This desktop application is a point-and-click solution that makes data migrations painless and reliable.

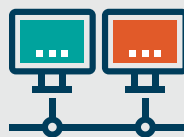

migrationIQ compacts years of data migration experience into an easy-to-use, best-practice-oriented tool. The intuitive interface is one of its most powerful features, which makes the process simple by guiding users through the data migration process. With migrationIQ there is no custom development required, it provides you an off-the-shelf solution compatible with any TrackWise® configuration.

Sikich offers you the flexibility of licensing migrationIQ for your internal team’s use, or as part of a service engagement that leverages our expert consultants and SME’s to supplement your staff. Either way, we can save you time and money.
